

## Protection is an Investment

EQCOMS RM Team 2013

### Company Profile

EQCOMS Technology Pte Ltd is a Singapore-based small and medium-sized enterprise, with a staff-strength of 12 people and an annual sales turnover of about \$3.5 million, the company specializes in construction and maintenance of data centre. It offers clients a complete and independent management of the entire construction project. Some of its many services include UPS, Security system, Electrical works, Fire protection system, Air cooling system and Structure cabling.

### Gaining Instant Recognition

Many companies have the misconception that bizSAFE is a programme for the large firms. bizSAFE is actually a five-step programme targeted at SMEs to help them acquire risk management capabilities whilst implementing a sound WSH Management System. Despite being classified under a low-risk sector, EQCOMS Technology decided to pursue bizSAFE Level 3 status.

The bizSAFE Level 3 journey has enhanced work attitude across the company, culminating in an accident-preventive culture led by top management. Although the company's clients do not require that the company has to be bizSAFE Level 3 certified, EQCOMS Technology strongly believes that this accreditation will soon become a tender requirement as it is already being practiced in many other industries. However, they do have some clients who will

ask if they are bizSAFE certified as well.

bizSAFE gives the company a competitive edge as clients and business partners can be assured of the safety and health standards of the workplace at EQCOMS Technology. The company gains instant recognition for their safety and health efforts through the usage of the bizSAFE logo in the commercial world.
